SPRINT SUMMARY

Planned Story Points: 35
Completed Story Points: 29
Velocity (avg. last 3 sprints): 35

IMPLEMENTATION NOTES & TECHNICAL ISSUES

During Sprint 3, the team successfully implemented 29 Story Points out of 35, focusing on advanced shape manipulation features (like shape mirroring and rotation), new drawable complex shapes (like irregular polygons and text) and canvas enhancements (like grid). The completed User Stories include:

- ◇ Grid on/Grid off
- ◇ Adjustable grid size
- ◇ Drawing an irregular polygon
- ◇ Text as a shape
- ◇ Rotate a shape
- ◇ Mirror a shape
- ◇ Group shapes
- ◇ Ungroup shapes

BACKLOG NOTES & ADJUSTMENTS

- ◇ User Story 4.5 (*Stretch a shape*): This User Story was originally intended to be implemented during this sprint, but due to time restrictions it was moved to the back of the sprint backlog, but unfortunately it couldn't be implemented on time.
- ◇ User Story 2.6 (Changing size operation): This User Story was moved from Sprint 2 to Sprint 3, but again due to time restriction and the complexity of the task (since it needed to be updated for polygon and text), it hasn't been implemented.
